Every system in its place.

BIM modelling and coordination

SERVICES

Building services BIM, from plant to rack.

Modelling, coordination and validation for the chillers, generators, pipework and containment that keep data centres running.

Model validation

Every model audited for accuracy, data and standards before it is issued.

Clash detection

Federated models, tracked clashes and weekly coordination, resolved before site.

MEP modelling

Mechanical, electrical and public health systems modelled to LOD 400, ready for coordination and fabrication.

Handover

Asset data and as-built models ready for operations.

Scope

We review your design information and confirm scope, fee and programme.

Model

Building services developed to the agreed level of detail and project standards.

Coordinate

Clashes identified, reviewed with the design team and resolved.

Issue

Validated models and drawings issued to your common data environment.

ISO 19650 · COBIE · UNICLASS — REVIT · NAVISWORKS · AUTODESK FORMA

WORK

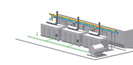

Selected models.

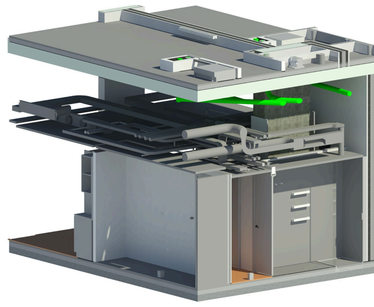

Representative views of the systems we model. Client projects are confidential, so details are shared on request.

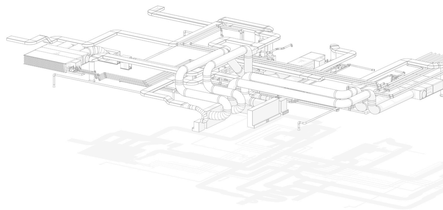

ABOUT

A specialist bureau for data centre building services.

Whitespace BIM works alongside contractors, consultants and operators to deliver coordinated building services models for data centres. We focus on the plant and services side, so the systems arrive on site fitted together and ready to install.

Specialist focus

Data centre MEP only: cooling, power and containment.

Coordinated delivery

Weekly clash reviews with the wider design team until every conflict is closed.

Standards led

Information delivered to ISO 19650, with models checked before every issue.

CONTACT

Let's talk about your project.

Send us your drawings or a short description of the scope, and we will come back with a fee and programme.
